About ISO/TC 292 and CEN/TC 391

ISO/TC 292 (Security and resilience) *was established on January 1 in 2015 and is a committee with over 50 involved countries. It works with standardization in the field of security to enhance the safety and resilience of society. The committee is responsible for more than 20 published International Standards. The mission for ISO/TC 292 Security and resilience is to produce high quality standards to support nations, societies, industry, organisations and people in general. The purpose of these standards is to enhance and sustain the state of being free from danger or threat and to feel safe, stable, and free from fear or anxiety. ISO (International Organization for Standardization) is the world's largest developer of standards, a network of the national standards institutes of 157 countries. More information is available at* http://www.iso.org/iso/en/aboutiso/introduction/index.html.

CEN/TC 391- Societal and Citizen Security *The main objective of CEN/TC 391 is to elaborate a family of European standards, standard-like documents (e.g., procedures, guidelines, best practices, minimal codes of practice and similar recommendations) in the Societal and Citizen Security sector including aspects of prevention, response, mitigation, continuity, and recovery before, during and after a destabilizing or disruptive event. Verification and training will also be considered. CEN/TC 391 comprises three Working Groups WG 1 (Healthcare Facilities); WG 2 (CBRNE) and WG 3 (Crisis management/civil protection). The three European Standardization Organizations (ESOs), CEN, CENELEC and ETSI are officially recognized as competent in the area of voluntary technical standardization. CEN and CENELEC are international non-profit associations. CEN and CENELEC, together with their Members, are committed to offering a transparent, open and inclusive system as the gateway for standardization in Europe. The European Standards published by CEN and CENELEC are developed by experts, established by consensus and adopted by the Members of CEN and/or CENELEC. STRATEGY Project - Promoting EU-Wide Standards & Policy

STRATEGY project aims to build and implement a pan-European pre-standardization framework and to map, test and validate new and existing standards across eight thematic streams in crisis management**:**

Stream 1: Search and rescue

Stream 2: Critical Infrastructures protection

Stream 3: Response planning

Stream 4: Command and control

Stream 5: Early warning and Rapid damage assessment

Stream 6: CBRN

Stream 7: Training

Stream 8: Terminology/Symbology.

The ultimate project goal is to strengthen the resilience of the EU against all types of natural & man-made disasters (multi-hazard approach), by ensuring first responders' safety and empowering their operational capacity through standardisation that may support next generation solutions and procedures, ensuring an effective and efficient collaborative response to crises. STRATEGY will support policy makers and relevant authorities in their efforts to improve the management of

cross-border crises by increasing the harmonisation of disaster management systems, tools and procedures. To achieve this, **STRATEGY will address standardization aspects on the aforementioned eight thematic streams by drafting a total of eleven CEN Workshop Agreements (CWAs) in properly planned CEN/CENELEC Workshops and two new CEN Technical Specifications (TS) in cooperation with the relevant CEN Technical Committee**. Contact STRATEGY project coordinator to learn more about the project and its activities at info@strategy-project.eu.
